• Secured and setting up new student account applications using the banks private software.

• Worked in the standing orders team, dealt with the processing and queries for these mandatory transactions Kept student account applicants informed on their status of the account set up via telephone and post.

Profile

Tell us why you chose pharmacy and why you want to work in community pharmacy.

When I was sixteen studying A Level Biology and Chemistry I was fascinated with human anatomy and the drugs to treat diseases. Further into my course I wanted to be involved with public health care that offered me flexibility with career options and concentrated on patient care in a more responsible nature.

Pharmacy is the best field in expertise on the learning of drugs. It focuses more on explaining how the chemical nature of the drugs works according to the physiology of the human anatomy.

Pharmacy can offer me the satisfaction of working with people from different specialities. I would be able to work with many healthcare professionals providing necessary information to improve patient care.

Working in a community pharmacy gives me an opportunity to gain an insight of what business and clinical expertise are needed to efficiently run the store. I ideally like to promote healthcare products and services, something which is expected in the job description of the pre registration pharmacist. Furthermore I find it highly appealing to be directly involved in improving the patient compliance, concordance and adherence which overall improves their quality of life.

Later into my career, I have a good opportunity to develop my management skills to become a store manger of an established pharmacy. Or I could improve my clinical knowledge and become a supplementary prescriber instead. Becoming a community pharmacist can take to many different directions in my professional career.

Tell us about your social and recreational interests. *mlah hah?*

Generally I take advantage of the activities offered from my university as much as I can. From the beginning of the academic year I have been involving in all of the social events the university has offered. On fresher's day I volunteered to help introducing new students to their first year by being a "big brother". I gave a tour of the university so that'll be more acquainted with the facilities and areas of London.

Recently I volunteered to become the university cricket team manager. I was integral in setting up proposals to gather funds for sportswear equipment, practice sessions and to register for cricket tournaments against our neighbouring universities. I also helped to find a reasonably priced cricket ground to book so that we used to play home games. The outcome of the proposal was that the team managed to gain funds to set up cricket tournaments and

was able to afford sportswear equipment. I also normally like to help out in charitable events.

I regularly go to the Student Union events such as pool tournaments and Bhangra classes on a weekly basis. I also like to keep fit going to the gym on a regular basis and during my spare time read horror novels, mainly the Stephen King selection

In the year 2007 I was involved in organising the university charity show for Great Ormond Street Hospital, raising over £2700. I helped publicised the event, selling tickets for the show and was participated in the fashion show and one of the dance acts.

Add anything else you want to tell us.

From my extra-curricular activities and jobs, I have had opportunities to learn and develop skills that are essential and transferrable to any profession, especially the pharmacy profession.

Communication Skills

Working in different job sectors with different roles, I have acquired the confidence to deal with important situations. Before starting my degree, I worked in a corporate bank dealing with tracking the status of CHAPS payments. Later on into my second year of the MPharm, I worked in Boots the Chemist, where I had to use my expertise alongside with a comprehensive number of multidisciplinary staff. Along with the personnel, I can gain an understanding of the conditions from a variety of patients. I have worked in a multicultural community so I am aware of the diverse number of issues that is dealt with in the community pharmacy.

Managerial Skills

My experiences attained from jobs and placements have given me certain opportunities to delegate daily operations in the healthcare counter in the pharmacy and manage the finances of the university cricket team.

Teamwork and Organisational Skills

Professionally I was an integral member of the healthcare team at the pharmacy I previously worked in. Whereas during my time in university I have helped publicise and stage two charity shows in consecutive years and I am currently helping organise the fourth years leaving ball.
